Kaliber™ Data Security Awareness and Protection for Business

PROTECT Personal and Corporate Information COMPLY with Information Security Regulations
DEVELOP Written Information Security Programs; MONITOR Data Security

The Employee Centric Path to Data Security: Awareness, Education, Training, Compliance

Kaliber is a consulting organization focused on helping you assure your firm's data security by improving the education, training and awareness of your employees. Kaliber provides on-line training courses on the nature of personal and company confidential information and the necessity and methods for keeping this information secure. Kaliber installs and configures tools to assist employees in finding, identifying and securing the confidential information that is under their control and provides management with reports that identify that policies and procedures are being followed.

Our Unique Four-Step Approach

Step 1: Discovery - Kaliber will assess your network to determine where confidential information is stored (data at rest) and where it may be leaving your network (data in motion).

Step 2: Education— Kaliber provides best-in-class online training tools to teach your staff about the nature of personal information and how to protect both the computer environment as well as the physical environment

Step 3: Policy— Kaliber provides your firm with the tools to establish a comprehensive corporate information security program and the means to monitor that each employee has read it and comprehends it.

Step 4: Compliance— Kaliber can install monitoring systems to assure that no unauthorized or unencrypted data is leaving your network in compliance with your firm's information security policy.
